REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Pedersen disclosed

A method of identifying optical channels in an optical WDM network, comprising the steps of: continuously generating two or more mutually different (page 5, lines 8-11) dither tones at a plurality of frequencies (page 10, lines 4-11, and page 16 lines 4-9); and intensity modulating (same passage AM modulation) and detecting said tones at various places in the network (page 8, lines 5-15). Pederson does not disclose ghost tones, generating alarms if channel signature is missing and if amplitude is below threshold, and cross gain modulation, inter alia.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
